

Why pay high local and long distance service charges when your company can enjoy the benefits of Voice over Internet Protocol (VoIP) without replacing your existing phone system?

Designed for businesses committed to keeping their existing PBX or Key Telephone Systems, Fusion's IP Connect service allows you to replace your current local access lines and data connections with a single, high-speed Internet connection. By seamlessly converging your voice and data traffic into one communications path over the Fusion managed IP network, your company can experience the advantages of IP technology while enjoying significant cost savings. Choose from three calling plans designed to meet the needs of different companies:

Easy Connect

A low monthly fee with usage-based local and long distance charges

Local Connect

Unlimited local area calling with usage-based long distance charges

Total Connect

Unlimited local and domestic long distance calling

Step Into Your Future...

Fusion's IP Connect service is your first step towards a converged voice and data solution. IP makes it possible, and Fusion makes it simple. You save on local and long distance calling, while retaining your existing phone system. You also gain the efficiencies of combining voice and data onto one Internet connection, while enjoying free "on-network" calling among your office locations.

Experience these benefits, and more, with Fusion's IP Connect.

Advantages

- ◆ **Investment Protection**
 No need to replace your phone system. IP Connect protects your investment by integrating your existing phone system with state-of-the-art IP technology.
- ◆ **Superior Quality**
 Quality of Service (QoS) access devices monitor voice and data traffic to ensure outstanding voice calls without sacrificing the quality of your data communications.
- ◆ **Improved Economics**
 IP Connect can reduce your company's communications costs, while providing new features designed to increase employee productivity.
- ◆ **Network Optimization**
 By combining your local access lines and high-speed Internet connection onto a single circuit, your company can reduce administration and overhead costs while increasing efficiency.
- ◆ **Greater Flexibility**
 Fusion's versatile IP Connect service allows for easy growth of local access lines and virtually unlimited capacity for local and long distance calling.

How Does It Work?

If you have an existing PBX or Key Telephone System, Fusion's IP Connect service provides you with a reliable broadband Internet connection, local access lines, and an Integrated Access Device (IAD) that converts your IP trunks into the analog and digital trunks required by your existing voice and data systems.

Get started is as simple as 1, 2, 3...

- 1 Select a calling plan to fit your needs.
- 2 A broadband Internet connection and an IAD with QoS capabilities will be installed at your location(s).
- 3 Begin enjoying your new communications capabilities in 30 days or less.
